PHP Developer Intern – Testing

Description

FusionDirectory is looking for interested interns to work on its flagship product, FusionDirectory software.

FusionDirectory is free identity management software

Responsabilités

You will be responsible for working with the current development team to:

- Test the software when reporting a bug or adding new features
- Write new test scenarios
- Help improve the software
- Understand the tools necessary to set up a continuous integration system

Qualifications

We are looking for interns in PHP who have experiences in the world of free software and who are aware of its philosophy.

We attach great importance to:

- Autonomy
- The experience of using free software
- Participation in free projects whether in code or otherwise
- Daily use of a Linux workstation
- Openness to discussion and proposal of solutions
